

Ledger User Stories

User Story: As an Accounts Payable Clerk at Corporation, I want to be able to create a ledger in accounting software to accurately track and manage our payables.

Scenario 1: Creating a New Ledger Entry

Given: The user is logged into the accounting software.

When: The user navigates to the "Ledger" section.

Then: The user should see an option to "Create New Ledger Entry."

Scenario 2: Entering Ledger Details

Given: The user is creating a new ledger entry.

When: The user provides the necessary details such as EntryID, CompanyID, Start Date, Description, Debit, Credit, and Balance.

Then: The system should validate the input and allow the user to save the new ledger entry.

Scenario 3: Viewing Ledger Entries

Given: The user is in the "Ledger" section of the accounting software.

When: The user wants to view existing ledger entries.

Then: The system should display a list of ledger entries with relevant details, including EntryID, CompanyID, Start Date, Description, Debit, Credit, and Balance.

Scenario 4: Editing a Ledger Entry

Given: The user is viewing the list of ledger entries.

When: The user selects a specific ledger entry to edit.

Then: The system should allow the user to modify the details and save the changes.
